No test questions the day before your exam.	Pass Your NCLEX!

Tips for success:

- When choosing questions, select 'all subjects and all lessons'
 - By selecting 'all subjects' and 'all lessons,' you will be practicing as similarly to the NCLEX as possible. It also preserves even distributions of subjects and lessons so that your readiness assessments and CAT exams are accurate. Lastly, by doing a broad range of practice questions (even on videos you haven't watched them yet!), you will be developing testing strategies that are essential for NCLEX success. I can almost guarantee that come NCLEX day, you will get a question about a topic that you didn't study- and by doing practice questions in this manner, you will be prepared for that!
- On days you take readiness assessments or CAT exams, do them before watching the video for that day.
- Handwrite your notes.
- On days you review your notes, read them out loud.
- When reviewing missed questions, really focus on the ones with a peer average of 40% or higher.
